Title or URL: Proposed management of Diesel/Biodiesel Blends...2008

Query: If I have read the position paper correctly, you are proposing to limit biodiesel development and give control of the product to multinational oil conglomerates and to also limit bd blends to no more than 5%.

I totally condemn such a short sighted proposal that:

- * limits the possibility of reducing this country's dependence on fossil fuels;
- * kills an emerging industry;
- * Limits any opportunity to reuse waste oil preventing it simply going into land fill;
- * Removes consumer's right to buy an alternate, environmentally better fuel
- * increases the profit of an oil industry that has been ripping off consumers for bloody years.

I use B20-50 regularly and wish to continue to enjoy a reduced fuel cost and a warm feeling that, at least, my vehicle is less damaging to the environment than it would be with 100% fossil fuel.

Your environmental credibility is in tatters even contemplating such a policy!!
