

TABLE OF CONTENTS

VOLUME 1

LIST OF ABBREVIATIONS

EXECUTIVE SUMMARY

E-1

1 INTRODUCTION AND BACKGROUND

1-1

1.1 Driving Forces For Changes To Fuel Quality Standards Internationally

1-2

1.2 Driving Forces For Changes To Fuel Quality Standards In Australia

1-5

2. MOTOR VEHICLE EMISSIONS - POLICY SETTING AND CONTROL TECHNOLOGIES

2-1

2.1 Policy Setting for Motor Vehicle Emissions and Air Quality

2-1

2.1.1 Overview of Current Air Quality Issues in Australia

2-1

2.1.2 Ambient Air Quality Standards by NEPC

2-2

2.1.3 Greenhouse Gas Commitment

2-3

2.1.4 Current & Proposed Vehicle Emission Standards of the European Union

2-4

2.1.5 Vehicle Emission Standards of the United Nations Economic Commission for Europe

2-12

2.1.6 Existing Vehicle Emission Standards in Australia

2-13

2.1.7 Vehicle Emission Standards Harmonisation in Australia

2-16

2.1.8 Proposed Future Vehicle Emission Standards in Australia - MVEC's Recommendations

2-17

2.2 Current Vehicle Engine And Emission Control Technologies

2-18

2.2.1 Summary of Fuel Consumption & Emissions Reduction Technologies

2-19

2.2.2 The Critical Technologies

2-22

2.2.3 The Critical Fuel Quality Parameters

2-26

2.2.4 Petrol Engine Technologies

2-27

2.2.5 Diesel Technologies

2-45

2.2.6 Technologies for In-Service and Maintenance Programs

2-59

2.3 Summary Of Key Points Relating To Motor Vehicle Emissions And Control Technologies

2-61

Tables - Chapter 2

2-1: National Ambient Air Quality Standards

2-3

2-2(a): Euro 1 to Euro 4 Emission Standards for Passenger Vehicles

2-7

2-2(b) Euro 1 and Euro 2 Emission Standards for Passenger Vehicles (category M1) 7 to 9 seats including driver or >2.5 tonnes GVM and Light Goods Vehicles to 3.5 tonnes GVM (category N1)

2-8

2-2(c) Euro 3 and Euro 4 Emission Standards for Passenger Vehicles (category M1) 7 to 9 seats including driver or >2.5 tonnes GVM and Light Goods Vehicles to 3.5 tonnes GVM (category N1)

2-9

TABLE OF CONTENTS, Continued

2-3(a)	Euro 1 and Euro 2 Emission Standards for Heavy Duty Diesel Vehicle Engines	2-10
2-3(b)	Euro 3, Euro 4 and Euro 5 Emission Standards for Heavy Duty Diesel Vehicle Engines	2-11
2-4:	Comparison of Emission Standards for heavy-duty Diesel Vehicle Engines	2-14
2-5:	Euro Emission Standards for Passenger Cars (up to 6 seats including driver and up to 2.5 tonnes GVM)	2-15
2.6	Comparison of Emissions Standards for Heavy Duty Diesel Vehicle Engines	2-15
2-7	Fuel-Sensitive Technologies for Spark-Ignition Engines	2-23
2-8	Fuel-Sensitive Technologies for Diesel Engines	2-25
2-9	Effects of a Typical (Active) Trap of a Heavy Duty Engine	2-58

Figures – Chapter 2

2-1	Schematic of the common rail injection system
2-2	PM Performance of Diesel Oxidation Catalyst
2-3	NO _x Trapping / Reduction Mechanism

3.	INTERNATIONAL FUEL QUALITY STUDIES AND REGULATIONS	3-1
3.1	Parameters Included In The Fuel Quality Studies	3-1
3.1.1	Petrol Fuel Quality Parameters	3-2
3.1.2	Diesel Fuel Quality Parameters	3-4
3.2	Review Of Fuel Quality Studies Undertaken In Australia And Australian Government Policies Relating To Fuel Quality	3-6
3.2.1	Review of Australian Design Rule ADR 37101 and 70/00, 1996	3-6
3.2.2	Independent Inquiry into Urban Air Pollution in Australia	3-7
3.2.3	The Prime Minister's Statement on Climate Change	3-9
3.2.4	Fuel Quality Recommendations in MVEC's Review of Motor Vehicle Emission Standards	3-10
3.2.5	State Government Policy Initiatives	3-10
3.3	Review Of Fuel Quality Studies Undertaken Overseas	3-13
3.3.1	US Auto/ Oil AQIRP Program	3-13
3.3.2	European Auto-Oil Program and EPEFE	3-17
3.3.3	Other Overseas Studies Relating Fuel Quality Specifications To Vehicle Emissions	3-26
3.4	International Fuel Standards	3-27
3.4.1	Overview of European Fuel Quality Regulations and Specifications	3-27
3.4.2	Overview Of United States Fuel Quality Regulations & Specifications	3-32
3.4.3	Fuel Quality Regulations and Specifications in Asia	3-36
3.4.4	Worldwide Fuel Charter	3-37
3.5	Summary of the Relationship Between Fuel Quality Parameters and Motor Vehicle Emissions Based on Fuel Quality Studies	3-49
3.5.1	Key Fuel Parameters for Noxious Motor Vehicle Emissions	3-49
3.5.2	Key Fuel Parameters for Greenhouse Emissions from Motor Vehicles	3-50

TABLE OF CONTENTS, Continued

Tables – Chapter 3

3-1: IMPACT OF PETROL FUEL PARAMETERS ON EXHAUST EMISSIONS	15
3-2: Impact Of Changes To Petrol Fuel Quality Parameters On Predicted Ozone Reduction	16
3-3: Impact Of Changes To Petrol Fuel Quality Parameters On Fuel Economy	16
3-4: Effect Of Improved Petrol On The Emissions Of Non-Catalyst Light Duty Vehicles	20
3-5: Effect Of Petrol Properties On The Emissions Of Catalyst Light Duty Vehicles	20
3-6: Impact Of Changes In Petrol Aromatic Content On Motor Vehicle Emissions From EPEFE Study	22
3-7: Impact Of Changes In Petrol Sulfur Concentration On Motor Vehicle Emissions From EPEFE Study	23
3-8: Impact Of Changes To Diesel Fuel Parameters On Motor Vehicle Emissions (Light Duty Vehicles) (From EPEFE Study)	25
3-9: Impact Of Changes To Diesel Fuel Parameters On Motor Vehicle Emissions (Heavy Duty Vehicles) (From EPEFE Study)	25
3-10: European Union Unleaded Petrol Fuel Quality Specifications.	29
3-11: European Union Diesel Fuel Quality Specifications.	30
3-12: Californian diesel reference fuel specification	34
3-13: World Wide Fuel Charter Specifications for Category 1 Unleaded Petrol	38
3-14: World Wide Fuel Charter Specifications for Category 2 Unleaded Petrol	39
3-15: World Wide Fuel Charter Specifications for Category 3 Unleaded Petrol	40
3-16: Volatility classes of harmonised specifications for petrol, Categories 2 and 3	41
3-17: World Wide Fuel Charter Specifications for Category 1 Diesel Fuel	43
3-18: World Wide Fuel Charter Specifications for Category 2 Diesel Fuel	44
3-19: World Wide Fuel Charter Specifications for Category 3 Diesel Fuel	45

4. STAKEHOLDER LIAISON

4-1

4.1 Issues Discussed with Stakeholders	4-1
4.2 Issues Raised By Stakeholders	4-2
4.2.1 Policy Settings	4-2
4.2.2 Technical Issues	4-10
4.2.3 Baseline And Scenarios For Evaluation	4-17
4.3 Summary of Key Issues	4-19
4.3.1 Key Issues Common to Most Parties	4-19
4.3.2 Key Issues for the Key Stakeholders Petroleum Industry	4-19
4.3.3 Vehicle Industry	4-19
4.3.4 Motoring Associations (Representing Consumers)	4-20
4.3.5 Regulators	4-20

Appendix

4-A List of Stakeholders

TABLE OF CONTENTS, Continued

5. SCENARIO DEVELOPMENT	5-1
5.1 Background to Scenario Development	5-1
5.2 Rationale for the Scenarios	5-2
5.3 Other Considerations	5-8
5.4 Adopted Scenarios in Detail	5-11

Tables – Chapter 5

5-1: Australian Refineries: 1997 Average Pool Qualities of Petrol and Diesel	4
5-2: 1998 Baseline Petrol Capability for Eight Refineries – Detail by Petrol Grade	5
5-3: Euro 4 Petrol Specifications and Agreed Levels (for Modelling Purposes) of Components Not Yet Specified for Euro 4	9
5-4: Euro 4 Diesel Specifications and Agreed Levels (for Modelling Purposes) of Components Not Yet Specified for Euro 4	9
5-5: Euro 3 Specifications for Petrol	16
5-6: Adopted Fuel Scenarios in Summary	20

VOLUME 2

6. VEHICLE AIR EMISSIONS	6-1
6.1 General Methodology	6-1
6.1.1 Greenhouse Emissions	6-2
6.2 Fleet Characteristics	6-4
6.2.1 Vehicle Stock	6-4
6.2.2 Vehicle Kilometres Travelled	6-7
6.2.3 VKT Per Vehicle Category and Vehicle Age Group	6-7
6.2.4 Fuel Use Profiles According to Relative VKT	6-7
6.2.5 Fuel Consumption	6-7
6.2.6 Petrol Fuel Splits	6-9
6.2.7 Fuel Consumption	6-9
6.3 Fuel Quality Effects	6-10
6.3.1 Criteria Pollutants - Combined Fuel Property Effects	6-10
6.3.2 Non-Catalyst Light Duty Petrol Vehicles	6-10
6.3.3 Catalyst Light Duty Petrol Vehicles	6-11
6.3.4 Light Duty Diesel Vehicles	6-11
6.3.5 Heavy Duty Diesel Vehicles	6-12
6.4 Fuel Volatility Effects	6-14
6.5 Air Toxics Benzene Other Air Toxics	6-14
6.6 Fleet Emissions - Scenario 1	6-16
6.6.1 Relative and Accumulated VKT	6-16
6.6.2 Fuel Properties	6-18
6.6.3 HC, NO _x and CO Exhaust Emission Rates	6-20

TABLE OF CONTENTS, Continued

6.6.4	Particulate Matter	6-21
6.6.5	Evaporative HC Emissions	6-23
6.6.6	Fleet HC, NOx, CO and PM ₁₀ Emission Rates	6-23
6.6.7	S ₀₂ And Lead	6-25
6.6.8	Air Toxics	6-25
6.6.9	Greenhouse Emissions	6-25
6.6.9	Fleet Emissions	6-26
6.7	Fleet Emissions - Scenario 2	6-31
6.7.1	Relative and Accumulated VKT	6-31
6.7.2	Fuel Properties	6-35
6.7.4	Particulate Matter	6-37
6.7.5	Evaporative HC Emissions	6-39
6.7.6	Fleet HC, NOx, CO and PM ₁₀ Emission Rates	6-39
6.7.7	S ₀₂ And Lead	6-41
6.7.8	Air Toxics	6-41
6.7.8a	Greenhouse Emissions	6-41
6.7.9	Fleet Emissions	6-42
6.8	Fleet Emissions - Scenario 3	6-45
6.8.1	Relative and Accumulated VKT	6-46
6.8.2	Fuel Properties	6-48
6.8.3	HC, NOx and CO Exhaust Emission Rates	6-50
6.8.4	Particulate Matter	6-51
6.8.5	Evaporative HC Emissions	6-52
6.8.6	Fleet HC, NOx, CO and PM ₁₀ Emission Rates	6-52
6.8.7	S ₀₂ And Lead	6-54
6.8.8	Air Toxics	6-54
6.8.9A	Greenhouse Emissions	6-54
6.8.9	Fleet Emissions	6-55
6.9	Fleet Emissions - Scenario 4	6-58
6.9.1	Relative and Accumulated VKT	6-58
6.9.2	Fuel Properties	6-58
6.9.3	HC, NOx and CO Exhaust Emission Rates	6-60
6.9.4	Particulate Matter	6-60
6.9.5	Evaporative HC Emissions	6-61
6.9.6	Fleet HC, NOx, CO and PM ₁₀ Emission Rates	6-61
6.9.7	S ₀₂ and Lead	6-63
6.9.8	Air Toxics	6-63
6.9.9A	Greenhouse Emissions	6-63
6.9.9	Fleet Emissions	6-64
6.10	Fleet Emissions - Scenario 5	6-68
6.11	Fleet Emissions - Scenario 6	6-72

TABLE OF CONTENTS, Continued

6.12	Discussion of Results	6-76
6.12.1	Combined State and Territory Pollutant Emissions	6-76
6.12.2	Relative Emission Trends – National Data	6-79
6.12.3	Emission Sensitivity to Benzene Content in Petrol	6-102
6.12.4	Emission Sensitivity to Other Fuel Components	6-103
6.12.5	Greenhouse Gas Emissions	6-103
6.13	Key Findings	6-105

Tables – Section 6

6-1:	Transport and Refinery Greenhouse Emissions 1990 to 1997	6-3
6-2:	Capital City VKT By Vehicle Category, 2000 (Million VKT)	6-5
6-3:	Capital City VKT By Vehicle Category, 2005 (Million VKT)	6-6
6-4:	Capital City VKT By Vehicle Category, 2010 (Million VKT)	6-6
6-5:	Capital City VKT By Vehicle Category, 2020 (Million VKT)	6-6
6-6:	Apportioning Of Petrol Consumption	6-9
6-7:	Effect Of Improved Petrol On The Emissions Of Non-Catalyst Light Duty Vehicles	6-11
6-8:	Relations Between Emissions And Fuel Properties For Catalyst Light Duty Vehicles	6-11
6-9:	Relations Between Emissions And Fuel Properties For Light Duty Diesel Vehicles	6-12
6-10:	Relations Between Emissions And Fuel Properties For Heavy Duty Diesel Vehicles	6-12
6-11:	Exhaust Voc Species Profiles	6-16
6-12:	Melbourne Fleet Profile, Petrol Fuelled Passenger And Light Commercial Vehicles, Scenario 1, 2000-2020	6-17
6-13:	Melbourne Fleet Profile, Diesel Fuelled Passenger And Light Commercial Vehicles, Scenario 1, 2000-2020	6-17
6-14:	Melbourne Fleet Profile, Diesel Fuelled Medium/Heavy Duty Vehicles, Scenario 1, 2000-2020	6-18
6-15:	Melbourne Fleet Profile, Petrol Fuelled Medium/ Heavy Duty Vehicles And Motorcycles, Scenario 1, 2000-2020	6-18
6-16:	Scenario 1 - Diesel Sulfur Content, 2000-2020	6-19
6-17:	Scenario 1 - Petrol Vapour Pressure, 2000-2020	6-19
6-18:	Scenario 1 - Leaded Petrol Availability, 2000-2020	6-20
6-19:	Scenario 1 - Petrol Benzene Content, 2000-2020	6-20
6-20:	Methodology And Assumptions For Estimating HC, NO _x and CO Exhaust Emission Factors	6-21
6-21:	Scenario 1 - Methodology And Assumptions For Estimating Particulate Emission Factors	6-22
6-22:	Methodology Used To Estimate Evaporative Emissions From Petrol Fuelled Passenger Vehicles	6-23

TABLE OF CONTENTS, Continued

6-23: Scenario 1 - Fleet HC, NO _x , CO and PM ₁₀ Annual Emission Rates For Capital Cities, 2000 - 2020	6-24
6-24: Fleet Average Air Toxic Profiles, Melbourne, Scenario 1, 2000-2020	6-25
6-25: CO ₂ Emission Factors and liquid Energy Densities by fuel type	6-26
6-26: Scenario 1 – Australian Greenhouse emissions from road transport	6-26
6-27: Scenario 1 – Summary Of Fleet Emissions, 2000	6-27
6-28: Scenario 1 – Summary Of Fleet Emissions, 2005 (Kg/Yr)	6-28
6-29: Scenario 1 – Summary Of Fleet Emissions, 2010 (Kg/Yr)	6-29
6-30: Scenario 1 – Summary Of Fleet Emissions, 2020 (Kg/Yr)	6-30
6-31: Vehicle Assumptions For Scenario 2	6-31
6-32: Melbourne Fleet Profile, Petrol Fuelled Passenger And Light Commercial Vehicles, Scenario 2, 2000-2020	6-32
6-33: Melbourne Fleet Profile, Diesel Fuelled Passenger And Light Commercial Vehicles, Scenario 2, 2000-2020	6-33
6-34: Melbourne Fleet Profile, Diesel Fuelled Medium/Heavy Duty Vehicles, Scenario 2, 2000-2020	6-34
6-35: Melbourne Fleet Profile, Petrol Fuelled Medium/ Heavy Duty Vehicles And Motorcycles, Scenario 2, 2000-2020	6-35
6-36: Methodology And Assumptions For Estimating HC, NO _x and CO Exhaust Emission Factors	6-36-37
6-37: Methodology & Assumptions For Estimating Particulate Emission Factors Scenario2	6-38
6-38: Scenario 2 - Fleet HC, NO _x , CO and PM ₁₀ Annual Emission Rates For Capital Cities, 2000	6-40
6-39: Fleet Average Air Toxic Profiles, Melbourne, Scenario 2, 2000-2020	6-41
6-40: Scenario 2 – Australian Greenhouse Emissions from Road Transport	6-42
6-41: Scenario 2 – Summary Of Fleet Emissions, 2000	6-42
6-42: Scenario 2 – Summary Of Fleet Emissions, 2005	6-43
6-43: Scenario 2 – Summary Of Fleet Emissions, 2010	6-44
6-44: Scenario 2 – Summary Of Fleet Emissions, 2020	6-45
6-45: Vehicle Assumptions For Scenario 3	6-45
6-46: Melbourne Fleet Profile, Petrol Fuelled Passenger And Light Commercial Vehicles, Scenario 3, 2000-2020	6-47
6-47: Melbourne Fleet Profile, Diesel Fuelled Passenger And Light Commercial Vehicles, Scenario 3, 2000-2020	6-48
6-48: 'Best Endeavours' Euro 3 / Euro 4 Petrol Specifications	6-49
6-49: 'Best Endeavours' Euro 4 Diesel Specifications	6-49
6-50: Methodology And Assumptions For Estimating HC, NO _x and CO Exhaust Emission Factors	6-50-51
6-51: Scenario 3 - Fleet HC, NO _x , CO and PM ₁₀ Annual Emission Rates For Capital Cities, 2000	6-53

TABLE OF CONTENTS, Continued

6-52:	Fleet Average Air Toxic Profiles, Melbourne, Scenario 3, 2000-2020	6-54
6-53	Scenario 3– Australian Greenhouse emissions from road transport	6-55
6-54	Scenario 3 – Summary Of Fleet Emissions, 2000	6-55
6-55	Scenario 3 – Summary Of Fleet Emissions, 2005	6-56
6-56:	Scenario 3 – Summary Of Fleet Emissions, 2010	6-57
6-57:	Scenario 3 – Summary Of Fleet Emissions, 2020	6-58
6-58:	Mandatory Euro 3 / Euro 4 Petrol Specifications	6-59
6-59:	Mandatory Euro 4 Diesel Specifications	6-60
6-60:	Scenario 4 – Fleet HC, NO _x , CO and PM ₁₀ Annual Emission Rates For Capital Cities, 2000	6-62
6-61:	Fleet Average Air Toxic Profiles, Melbourne, Scenario 4, 2000-2020	6-63
6-62	Scenario 4– Australian Greenhouse emissions from road transport	6-64
6-63:	Scenario 4 – Summary Of Fleet Emissions, 2000	6-64
6-64:	Scenario 4 – Summary Of Fleet Emissions, 2005	6-65
6-65:	Scenario 4 – Summary Of Fleet Emissions, 2010	6-66

TABLE OF CONTENTS, Continued

6-66: Scenario 4 – Summary Of Fleet Emissions, 2020	6-67
6-67: Scenario 5 – Summary Of Fleet Emissions, 2000	6-68
6-68: Scenario 5 – Summary Of Fleet Emissions, 2005	6-69
6-69: Scenario 5 – Summary Of Fleet Emissions, 2010	6-70
6-70: Scenario 5 – Summary Of Fleet Emissions, 2020	6-71
6-71: Scenario 6 – Summary Of Fleet Emissions, 2000	6-72
6-72: Scenario 6 – Summary Of Fleet Emissions, 2005	6-73
6-73: Scenario 6 – Summary Of Fleet Emissions, 2010	6-74
6-74: Scenario 6 – Summary Of Fleet Emissions, 2020	6-75
6-75: Greenhouse Gas Emissions (Gg of CO ₂ Equivalent)	6-104
6-76 Refinery Greenhouse Emissions Increases (Gg CO ₂ Equivalent)	6-104

FIGURES

6-1 Hydrocarbon Emissions – Combined State and Territory Capitals	6-77
6-2 Carbon Monoxide Emissions – Combined State and Territory Capitals	6-77
6-3 Oxides of Nitrogen Emissions	6-78
6-4 Particular Matter (<10 µm) Emission	6-78
6-5 Benzene Emissions	6-79
6-6 Vehicle Components of VKT	6-80
6-7 VKT by Fuel Type	6-81
6-8 Hydrocarbon Emissions by Vehicle Type	6-82
6-9 Oxides of Nitrogen Emissions by Vehicle Type	6-83
6-10 Carbon Monoxide Emissions by Vehicle Type	6-84
6-11 Particulate Matter Emissions by Vehicle Type	6-85
6-12 Acetaldehyde Emissions by Vehicle Type	6-86
6-13 Benzene Emissions by Vehicle Type	6-87
6-14 1,3-Butadiene Emissions by Vehicle Type	6-88
6-15 Formaldehyde Emissions by Vehicle Type	6-89
6-16 Poly-aromatic Hydrocarbons (semi-volatile) Emissions by Vehicle Type	6-90
6-17 Hydrocarbon Emissions by Fuel Type	6-91
6-18 Oxides of Nitrogen Emissions by Fuel Type	6-92
6-19 Carbon Monoxide Emissions by Fuel Type	6-93
6-20 Particulate Matter Emissions by Fuel Type	6-94
6-21 Acetaldehyde Emissions by Fuel Type	6-95
6-22 Formaldehyde Emissions by Fuel Type	6-96
6-23 Benzene Emissions by Fuel Type	6-97
6-24 1,3-Butadiene Emissions by Fuel Type	6-98
6-25 Polyaromatic Hydrocarbon (semivolatile) Emissions by Fuel Type	6-99
6-26 Contributions of Hydrocarbons from Tailpipe Exhaust & Evaporatives	6-100
6-27 Contributions of Benzene from Tailpipe Exhaust & Evaporatives	6-101/102

TABLE OF CONTENTS, Continued

Appendices – Section 6

- 6-A Vehicle Fleet Age Structure
- 6-B Fuel Demand Projections
- 6-C Vehicle Fleet Profiles
- 6-D Overall fleet Emission Factor Summary
- 6-E Hydrocarbon Emission Speciation Profiles
- 6-F Emissions Inventory Projections
- 6-G Fuel Split by Vehicle Kilometres Travelled

7. IMPACT OF THE PROPOSED FUEL QUALITY SCENARIOS ON THE AUSTRALIAN REFINING INDUSTRY

	7-1
7.1 Australian Refining Industry Technologies	7-1
7.1.1 The Typical Oil Refinery	7-1
7.1.2 Australia's Eight Major Refineries	7-6
7.2 Methods of Achieving Fuel Quality Changes in Australian Refineries	7-10
7.2.1 Reduction of Reid Vapour Pressure (RVP) in Petrol	7-10
7.2.2 Benzene Reduction in Petrol	7-12
7.2.3 Sulfur Reduction in Petrol	7-13
7.2.4 Octane Increase In Petrol	7-14
7.2.5 Sulfur Reduction in Diesel	7-14
7.3 Modelling The impacts Of Changes To Fuel Quality	7-15
7.4 Assessment Of The Cost Implications Of The Proposed Scenarios On The Refining Industry	7-15
7.4.1 Formula for Refining Cost of Fuel Quality Changes	7-18
7.4.2 Refinery Costs Associated with Scenario 4	7-18
7.5 Differences in Refinery Cost Estimates	7-25
7.6 Key Issues for Refiners	7-26
7.7 Summary of the Estimated Average Cost Implications of the Proposed Scenarios on the Refining Industry (Relative to Scenario 1)	7-29
7-8 Summary of Key Issues	7-30

Tables – Chapter 7

7-1 Important Products from Crude Petroleum	7-3
7-2 Refinery Crude Capacity and Relative Plant Sizes, 1997 (AIP, 1998)	7-7
7-3 Australian Refineries – 1997 Average Pool Qualities of Petrol & Diesel(AIP1998b)	7-8
7-4 Estimate of Required Seasonal Decrease in Petrol Reid Vapour Pressure (RVP)	7-11
7-5 Fuel Quality Specifications Adopted for the Modelling	7-17
7-6 Summary of Average Fuel Cost Increases (Compared with Scenario 1)	7-29

TABLE OF CONTENTS, Continued

Figures – Chapter 7

- 7-1 Total capital costs to provide Euro 4 diesel and petrol
- 7-2 Estimated Cost of production of Euro 4 Petrol
- 7-3 Estimated Cost of production of Euro 4 Diesel
- 7-4 Estimated Additional Greenhouse Gas Emissions for the Production of Euro 4 Fuels (Relative to Euro 2 Fuels)

8. ESTIMATING THE IMPACT OF HIGHER FUEL PRICES ON THE AUSTRALIAN ECONOMY

- 8.1 Introduction 8-1
- 8.2 The Modelling Framework 8-1
- 8.3 Results of the Illustrative Simulation of the Costs of Achieving Higher Fuel Standards 8-2
- 8.4 Estimation of the Impact of the Estimated Fuel Price Increases for Each Scenario on the Australian Economy 8-4
- 8.5 Conclusion 8-6

Tables – Chapter 8

- 1 Impact on selected industries of a one per cent decline in the productivity of the Petroleum and Coal Products Industry

Figures – Chapter 8

- 1 Macro economic impact of a one per cent productivity decline in the Petroleum Products Industry (per cent change)
- 2 Impact on national output of a decline in one per cent productivity in the Petroleum and Coal Products Industry (\$million, 1994–95 prices)

Attachment

- 8-A: Overview of the STATE Model
- 8-A1 The Economic Environment
- Table A1: Industries/commodities of the STATE Model
