Wakefield, N.A. (1962). Leopard seal At Orbost. *Victorian Naturalist* **78**: 359–60. (The brief description given (by a schoolgirl in a 1926 school magazine) could well fit other kinds of seals. It is strange that only large brown spots on the back of the neck are mentioned and nothing is said of spots on the rest of the body. The elephant seal in moult could appear spotted as in the description. All seals have large canines. The leopard seal cannot support itself on its reduced flippers and the fact that the seal described rose on its flippers and dived into the river suggests an agility on land that the leopard seal does not have. When approached on land it usually stands its ground and gapes). Seals
